LR CLASSIC. We are delighted to announce the pre-production release of our latest LR Classic Rebuild due to go into production in October 2020. A 1986 110 3.5 litre V8 soft top beachcomber. Registered on 01/01/1986. This 110 will undergo a full overhaul from a new certificate approved chassis (still able to export), new doors, bulkhead. The engine and driveline will be overhauled as will the axles and diffs. All nuts and bolts replaced, full respray in Bronze green and body coloured raptor lined inside. This will be a real head turner. Keep an eye out for the latest news about this build on our social media platforms.

LR Classic offers full restorations to limited edition Land Rovers of bygone times, focusing on every detail to ensure the vehicle is the epitome of each rare model we meticulously rebuild. Our commitment to giving every vehicle a new lease of life is built upon with our small annual output of vehicles, meaning our team has more time to research, develop and restore these historic vehicles to their former immaculate glory. The average modern vehicle has a lifespan of just 13 years before it is scrapped. With LR Motors' dedication to ensuring we live in an environmentally friendly world, we are giving the average 20-40 year old Land Rover a new lease of life in order to provide it with a further 20-40 years of use. We source our parts and items as locally as possible, sometimes just 200 yards around the corner, meaning there are fewer shipment miles: a very different story for brand-new vehicles, commonly assembled overseas.

LR Classic only produces around two to three vehicles per annum, ranging from pre-production Series I to 50th Anniversary Defender 90.

## Features

## Technical Data
